

# **hang** – environments for hanging paragraphs and list items

Andreas Nolda

2017/02/18 (v. 2.1)

The **hang** package provides environments for hanging paragraphs and list items. In addition, it defines environments for labeled paragraphs and list items.

## **1 Hanging paragraphs and list items**

A *hanging* paragraph or list item is a text block where all lines but the first one are indented by some  $\langle length \rangle$ :

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis.

**\hangingindent** In the following environments, the indentation  $\langle length \rangle$  defaults to **1em**. It is controlled by the **\hangingindent** length, which can be changed as follows:

**\setlength{\hangingindent}{\langle length \rangle}**

**\hangingleftmargin** The left margin of the whole hanging paragraph or list item equals the **\hangingleftmargin** length, which defaults to zero. In the above example, it is set to **1em** with **\setlength**.

### **1.1 Hanging paragraphs**

**hangingpar** The **hangingpar** environment sets *single* hanging paragraphs:

```
\begin{hangingpar}  
<text>  
\end{hangingpar}
```

### **1.2 Hanging list items**

**hanginglist** The **hanginglist** environment sets one or more hanging list items:

```
\begin{hanginglist}  
\item <text>  
:  
\end{hanginglist}
```

`compacthang` The `compacthang` environment sets one or more hanging list items without vertical space:

```
\begin{compacthang}
\item <text>
:
\end{compacthang}
```

## 2 Labeled paragraphs and list items

A *labeled* paragraph or list item consist of a  $\langle label \rangle$  and a text block, which is indented by some  $\langle length \rangle$ :

$\langle label \rangle$  Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis.

The following environments set the indentation  $\langle length \rangle$  to the width of their  $\langle widest\_label \rangle$  argument.

The left margin of the whole labeled paragraph or list item (including the  $\langle label \rangle$ ) equals the `\labeledleftmargin` length, which defaults to zero, too. In the above example, it is again set to `1em`.

### 2.1 Labeled paragraphs

`labeledpar` The `labeledpar` environment sets *single* labeled paragraphs:

```
\begin{labeledpar}{\langle widest_label \rangle}{\langle label \rangle}
<text>
\end{labeledpar}
```

### 2.2 Labeled list items

`labeledlist` The `labeledlist` environment sets one or more labeled list items:

```
\begin{labeledlist}{\langle widest_label \rangle}
\item[\langle label \rangle] <text>
:
\end{labeledlist}
```

`compactlabel` The `compactlabel` environment sets one or more labeled list items without vertical space:

```
\begin{compactlabel}{\langle widest_label \rangle}
\item[\langle label \rangle] <text>
:
\end{compactlabel}
```
